

Pizza Sales Dashboard

Analysis Using PowerBI

Analysis Using SQL (SSMS)

A. KPI's :

1. Total Revenue :

```
--revenue_find  
select sum(total_price) as Total_Revenue from pizza_sales;
```

The screenshot shows the SQL Server Enterprise Manager interface. The 'Results' tab is active, displaying a single row with the column 'Total_Revenue' and the value '817860.05083847'. The 'Messages' tab is also visible.

	Total_Revenue
1	817860.05083847

2. Average Order Value :

```
--Average order value  
select sum(total_price) / count(distinct(order_id)) as avg_order_value from pizza_sales;
```

The screenshot shows the SQL Server Enterprise Manager interface. The 'Results' tab is active, displaying a single row with the column 'avg_order_value' and the value '38.3072623343546'. The 'Messages' and 'Client Statistics' tabs are also visible.

	avg_order_value
1	38.3072623343546

3. Total Pizza sold :

```
--Total Pizza sold  
select sum(quantity) as sold_qunatity from pizza_sales;
```

The screenshot shows the SQL Server Enterprise Manager interface. The 'Results' tab is active, displaying a single row with the column 'sold_qunatity' and the value '49574'. The 'Messages' and 'Client Statistics' tabs are also visible.

	sold_qunatity
1	49574

4. Total order place :

```
--Order Placed  
select count(distinct(order_id)) as total_order_place from pizza_sales;
```

The screenshot shows the SQL Server Enterprise Manager interface. The 'Results' tab is active, displaying a single row with the column 'total_order_place' and the value '21350'. The 'Messages' and 'Client Statistics' tabs are also visible.

	total_order_place
1	21350

5. Average pizzas sold per order

```
--AVG Pizza Sold / Order
select
cast(
    cast(sum(quantity) as decimal(7,2)) / cast(count(distinct(order_id))as decimal (7,2)
)as decimal(10,2))
as sold_per_order from pizza_sales;
```

The screenshot shows a SQL Server query window with the 'Results' tab selected. The query result is displayed in a table with two columns: 'sold_per_order' and a single row with the value '2.32'.

	sold_per_order
1	2.32

B. Chart Tables:

6. Daily Trend for Total orders :

```
--Total Orders Place on Day based
select datename(dw,order_Date) as order_day, count(distinct order_id) as total_orders
from pizza_sales
group by datename(dw , order_date)
```

The screenshot shows a SQL Server query window with the 'Results' tab selected. The query result is displayed in a table with two columns: 'order_day' and 'total_orders'. The data is sorted by total orders in descending order.

	order_day	total_orders
1	Saturday	3158
2	Wednesday	3024
3	Monday	2794
4	Sunday	2624
5	Friday	3538
6	Thursday	3239
7	Tuesday	2973

7. Hourly Trends for Total orders :

```
--hourly Trends Based on Total Orders
select datename(Hour, order_time) as Hours_digit , count(distinct order_id) as Total_Orders
from pizza_sales
group by datename(Hour , order_time )
order by total_orders desc
```

100 %

Results Messages Client Statistics

	Hours_digit	Total_Orders
1	12	2520
2	13	2455
3	18	2399
4	17	2336
5	19	2009
6	16	1920
7	20	1642
8	14	1472
9	15	1468
10	11	1231
11	21	1198
12	22	663
13	23	28
14	10	8
15	9	1

8. Monthly trend based on total order:

--Monthly Trends Based on Total Orders

```
select datename(Month, order_date) as month_name , count(distinct order_id) as Total_Orders
from pizza_sales
group by datename(month , order_date )
order by total_orders desc
```

100 %

Results Messages Client Statistics

	month_name	Total_Orders
1	July	1935
2	May	1853

2	The Green Garden Pizza	13955.75
3	The Spinach Supreme Pizza	15277.75
4	The Mediterranean Pizza	15360.50
5	The Spinach Pesto Pizza	15596.00

Insights and Recommendation

1. Customer Ordering Behavior :

- **Peak Days** : Thursdays and Fridays have the highest order volumes.
- **Peak Hours** : Evening hours between 7 PM – 9 PM show the most activity.
- **Avg Pizzas per Order** : 2.32 pizzas per order indicate frequent group/family purchases.

✦ **Recommendation:** *Increase staffing and delivery capacity during peak slots. Launch targeted offers for lunchtime and weekdays to balance demand.*

2. Sales Performance by Pizza Size :

- Large pizzas **lead** significantly in **sales volume** and **revenue**.
- Medium and Regular have **moderate performance**.

✦ **Recommendation:** *Bundle large pizzas with beverages or desserts to increase upselling. Introduce solo meal deals using medium/regular sizes.*

3. Product Category Trends :

- Classic and Supreme pizzas are **top performers**.
- Veggie and Chicken categories **contribute evenly** (around 24% each).

✦ **Recommendation:** *Continue promoting Classic & Supreme options. Reposition Veggie pizzas as healthy alternatives for niche audiences.*

4. Top vs Bottom Performers :

- **Top Revenue Generators:** Thai Chicken, Barbeque Chicken, Classic Deluxe
- **Lowest Performers:** Spinach Supreme, The Green Garden, Chicken Italiano

✦ **Recommendation:** *Use top sellers in combo promotions. For low performers, consider rebranding or limited-time offers before phasing out.*

5. Seasonality and Trends :

- Monthly order trends show dips in **December** and peaks around **May & July**.

✦ **Recommendation:** *Launch seasonal offers or holiday-specific deals in slow months to boost sales and customer retention.*
